

Qbao Network  
The key of blockchain cosmos

# Cryptocurrency will be a mainstream currency for payment of new era.

- Cryptocurrency is a digital asset which will be favored by global investors and become a common financial instrument in many specific scenarios.
- In the next 5 years, the total market value of cryptocurrency will likely reach 7.5 trillion USD which is approximately 10% of total currency in the world.
- Blockchain industry will produce 80 billion to 110 billion US dollars in 2020.
- Blockchain technology, as the second generation of Internet technology, will profoundly change various industries and open the era of value Internet.

**7.5 trillion USD**

Total market value of encrypt- currency in 2022

**80 billion to 110 billion USD**

Revenue generated by the blockchain industry in 2020

## Current problems in the digital asset management applications

**Security**

**Privacy**

**Convenience**

**Customer  
experience**

**Information  
Isolation**

1. Building a cryptocurrency wallet with safety, privacy and better product experience.
2. Building a cross-chain wallet with user-friendly interface. With the increasing variety of digital assets, the cross-chain usage and management of digital assets become a tough challenge.

**NEXT**

# The Internet needs to be evolved from passing information to delivering value.

BTC system has been running steadily for more than 8 years, which fully demonstrate its excellent performance in delivering value.

**Multi-scenarios  
application**

**Comprehensive  
functions**

**Safe and reliable**

**Excellent user's  
experience**

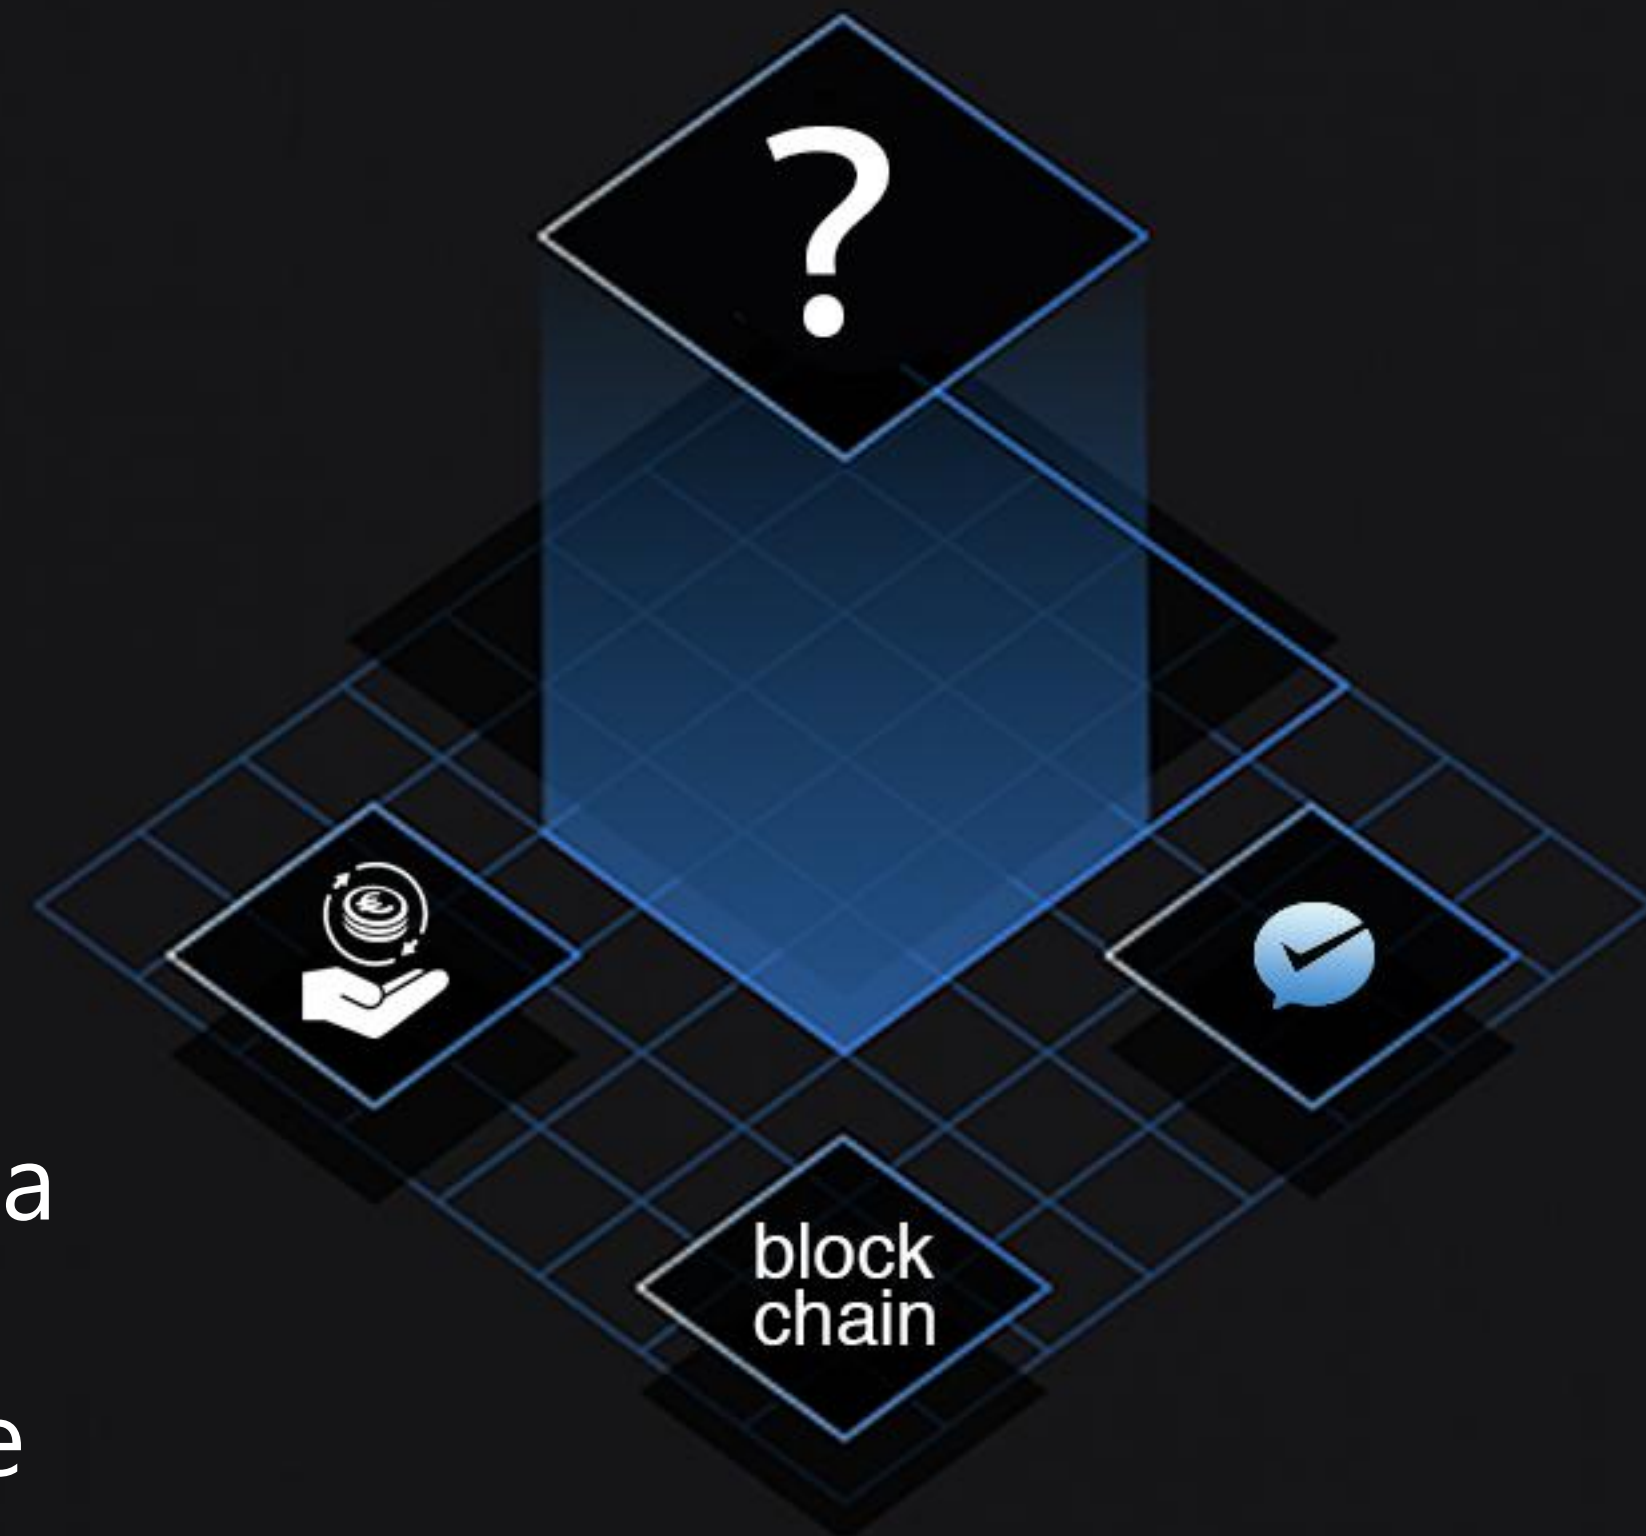

# Qbao Pay

An illustration of a restaurant scene. In the foreground, a person is using a laptop. In the background, a server is interacting with a customer, holding a smartphone. A blue checkmark icon is positioned over the smartphone. The text 'Qbao Pay' is overlaid in the center. The background features a grid pattern and a potted plant on the right.

**The two most attractive and most booming rising stars in payment industry are mobile payment and the blockchain technology.**

If the two are combined together to create a safer, faster and more effective way of payment and transfer method, What will the result be?

# Blockchain technology will change the mobile payment in four ways

## 1. Assets security

---

Blockchain technology guarantees the better security

---

## 2. Convenience

---

Break through geographical restrictions and complete transactions in real time

---

## 3. Better interaction

---

Consumers like to be rewarded in the process of payment. The mobile terminal has been proven to be a good platform for providing and managing incentive activities.

---

## 4. Lower cost

---

The cost of remittances is reduced to 5%, and global consumers will be able to save \$16 billion a year.

---

# Cross-chain Payment and Settlement center

## 1. Digital currency payment and settlement

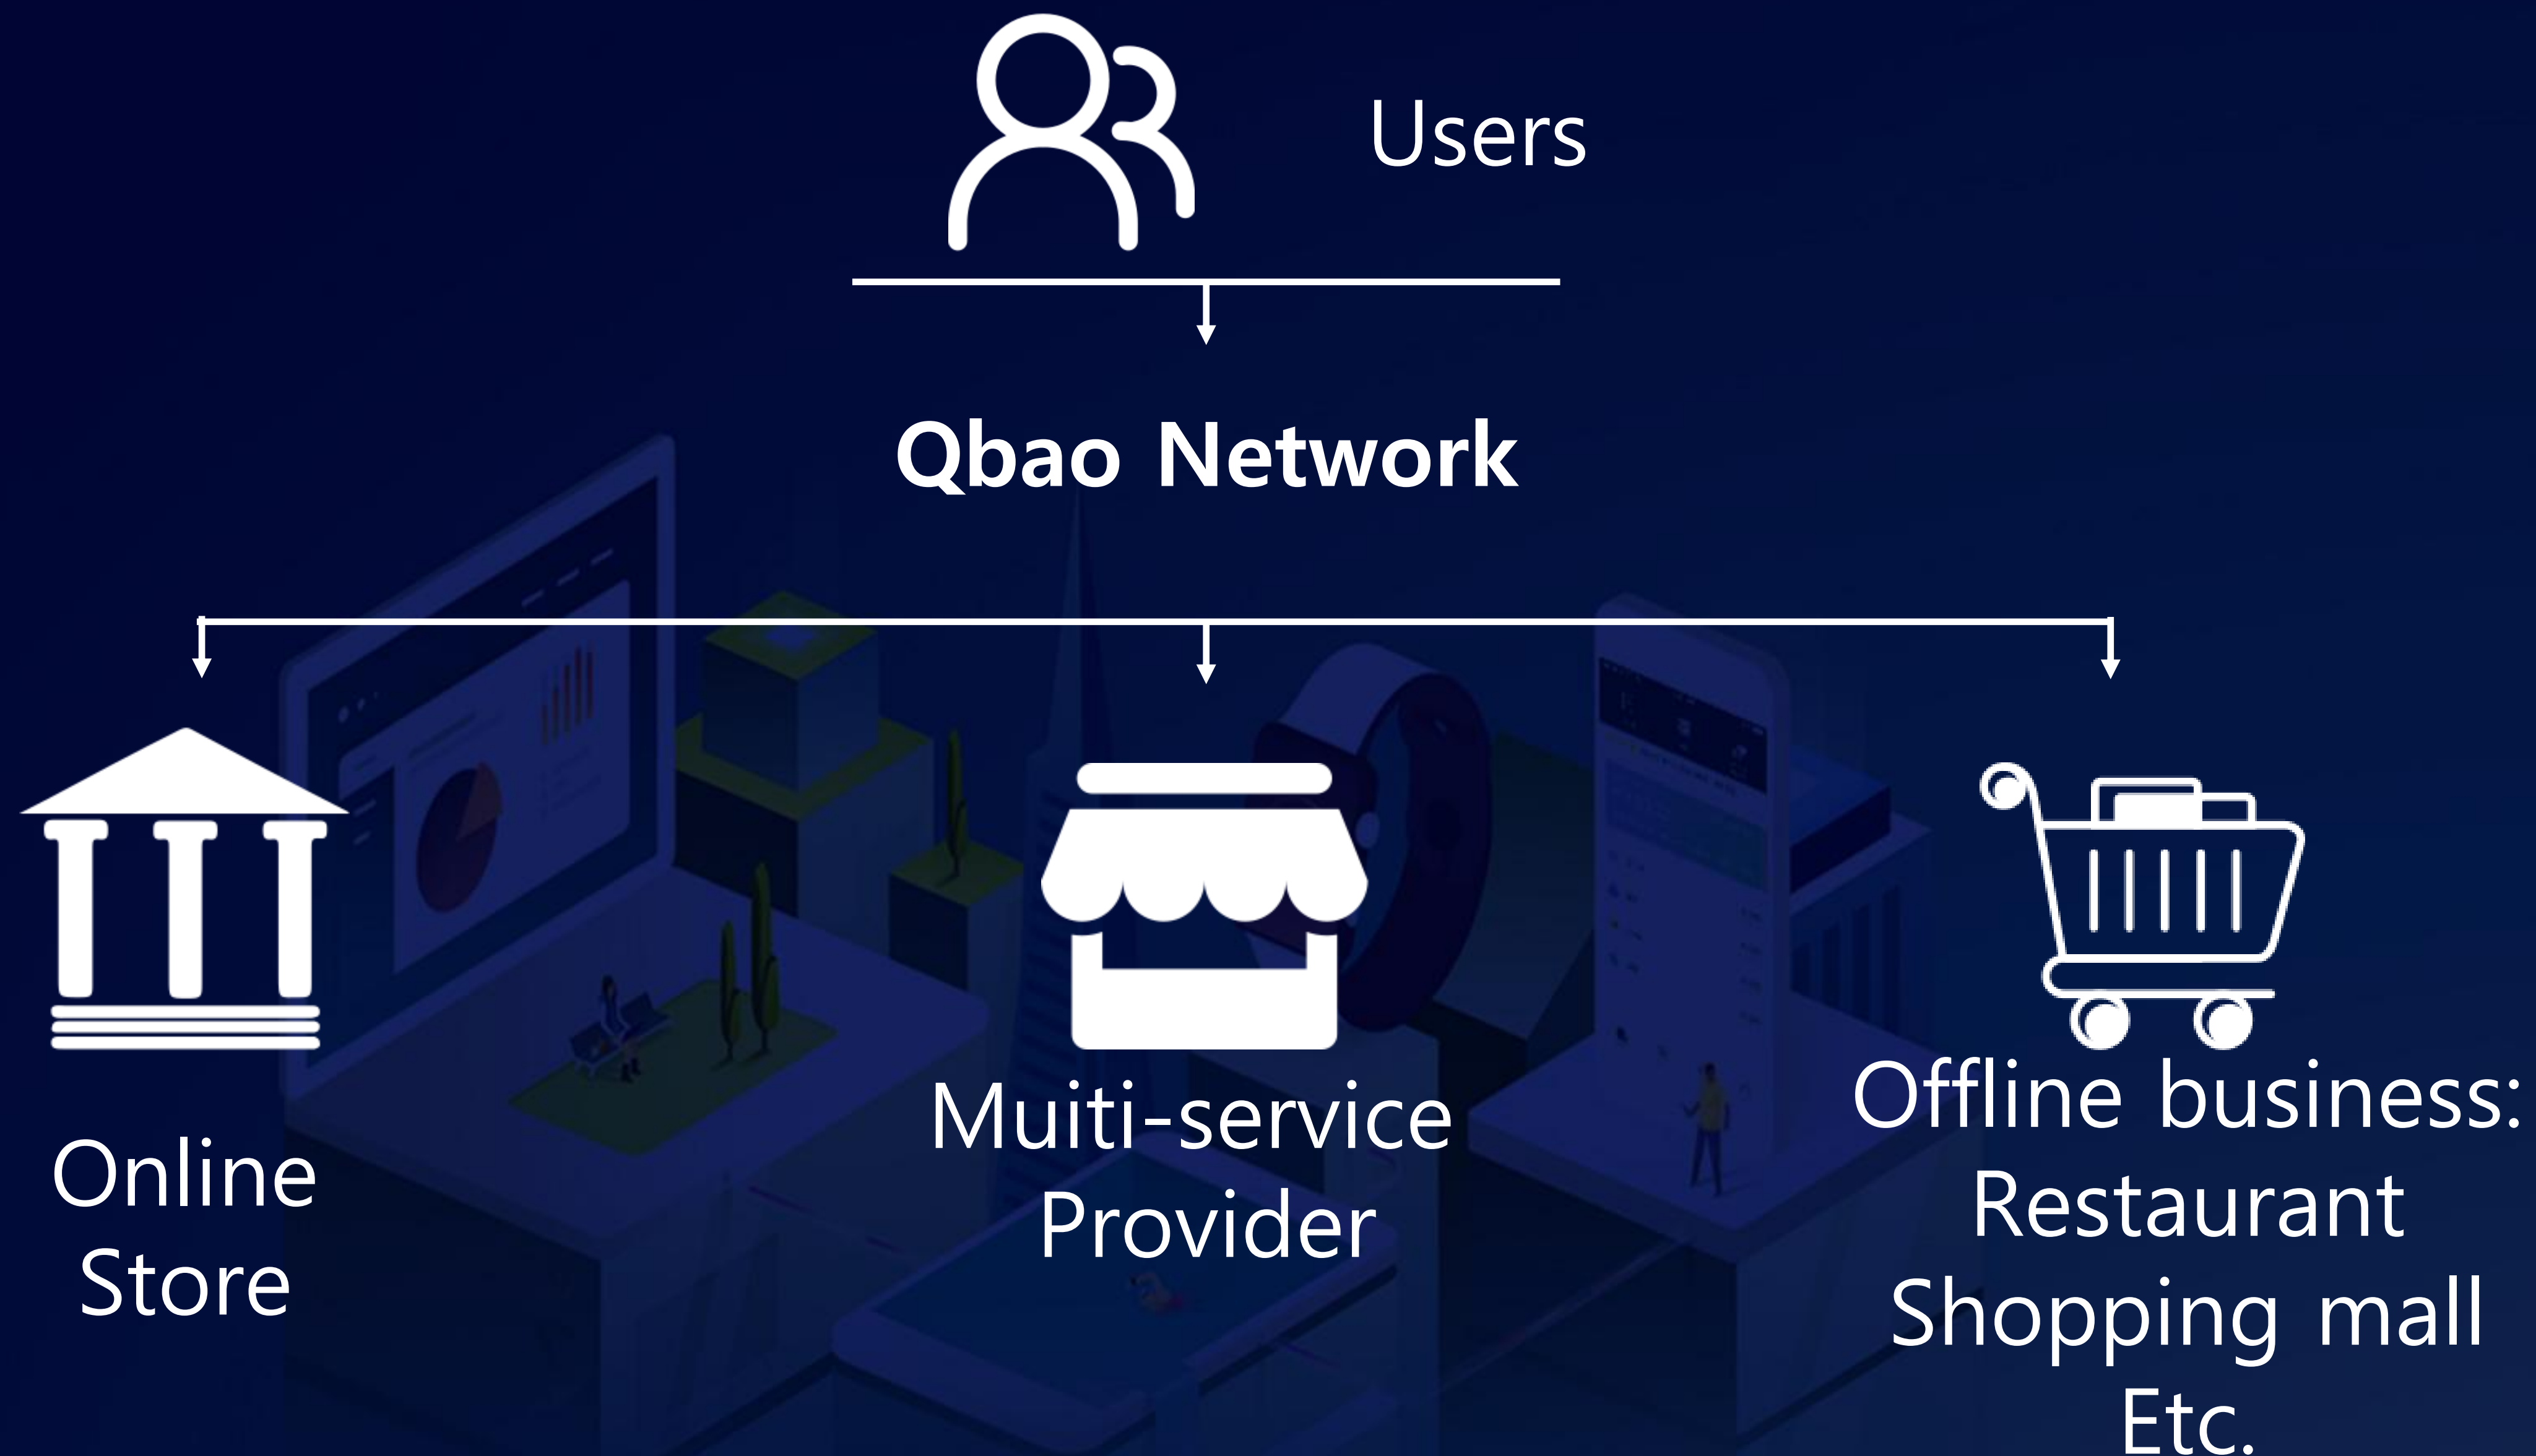

- more convenient and safer
- Easy management of digital asset

## 2. The connection between business and customers

- to buy real world goods and services with digital-currencies
- more efficient and safer
- to transfer value between the virtual world and the real world

# Qbao Network Solution

The Blockchain Economy

# Road Map V2.3

**2018**  
**Comprehensive  
realization of  
product strategy**

# Qbao Network

## recent version planning

01

Cryptocurrency exchange  
Decentralized transaction  
Credit rating services

02

Digital-currency  
payment platform  
Open API

03

Finding partners to  
apply crypto currency  
payment scenarios for  
both offline businesses  
and online games and  
entertainment

04

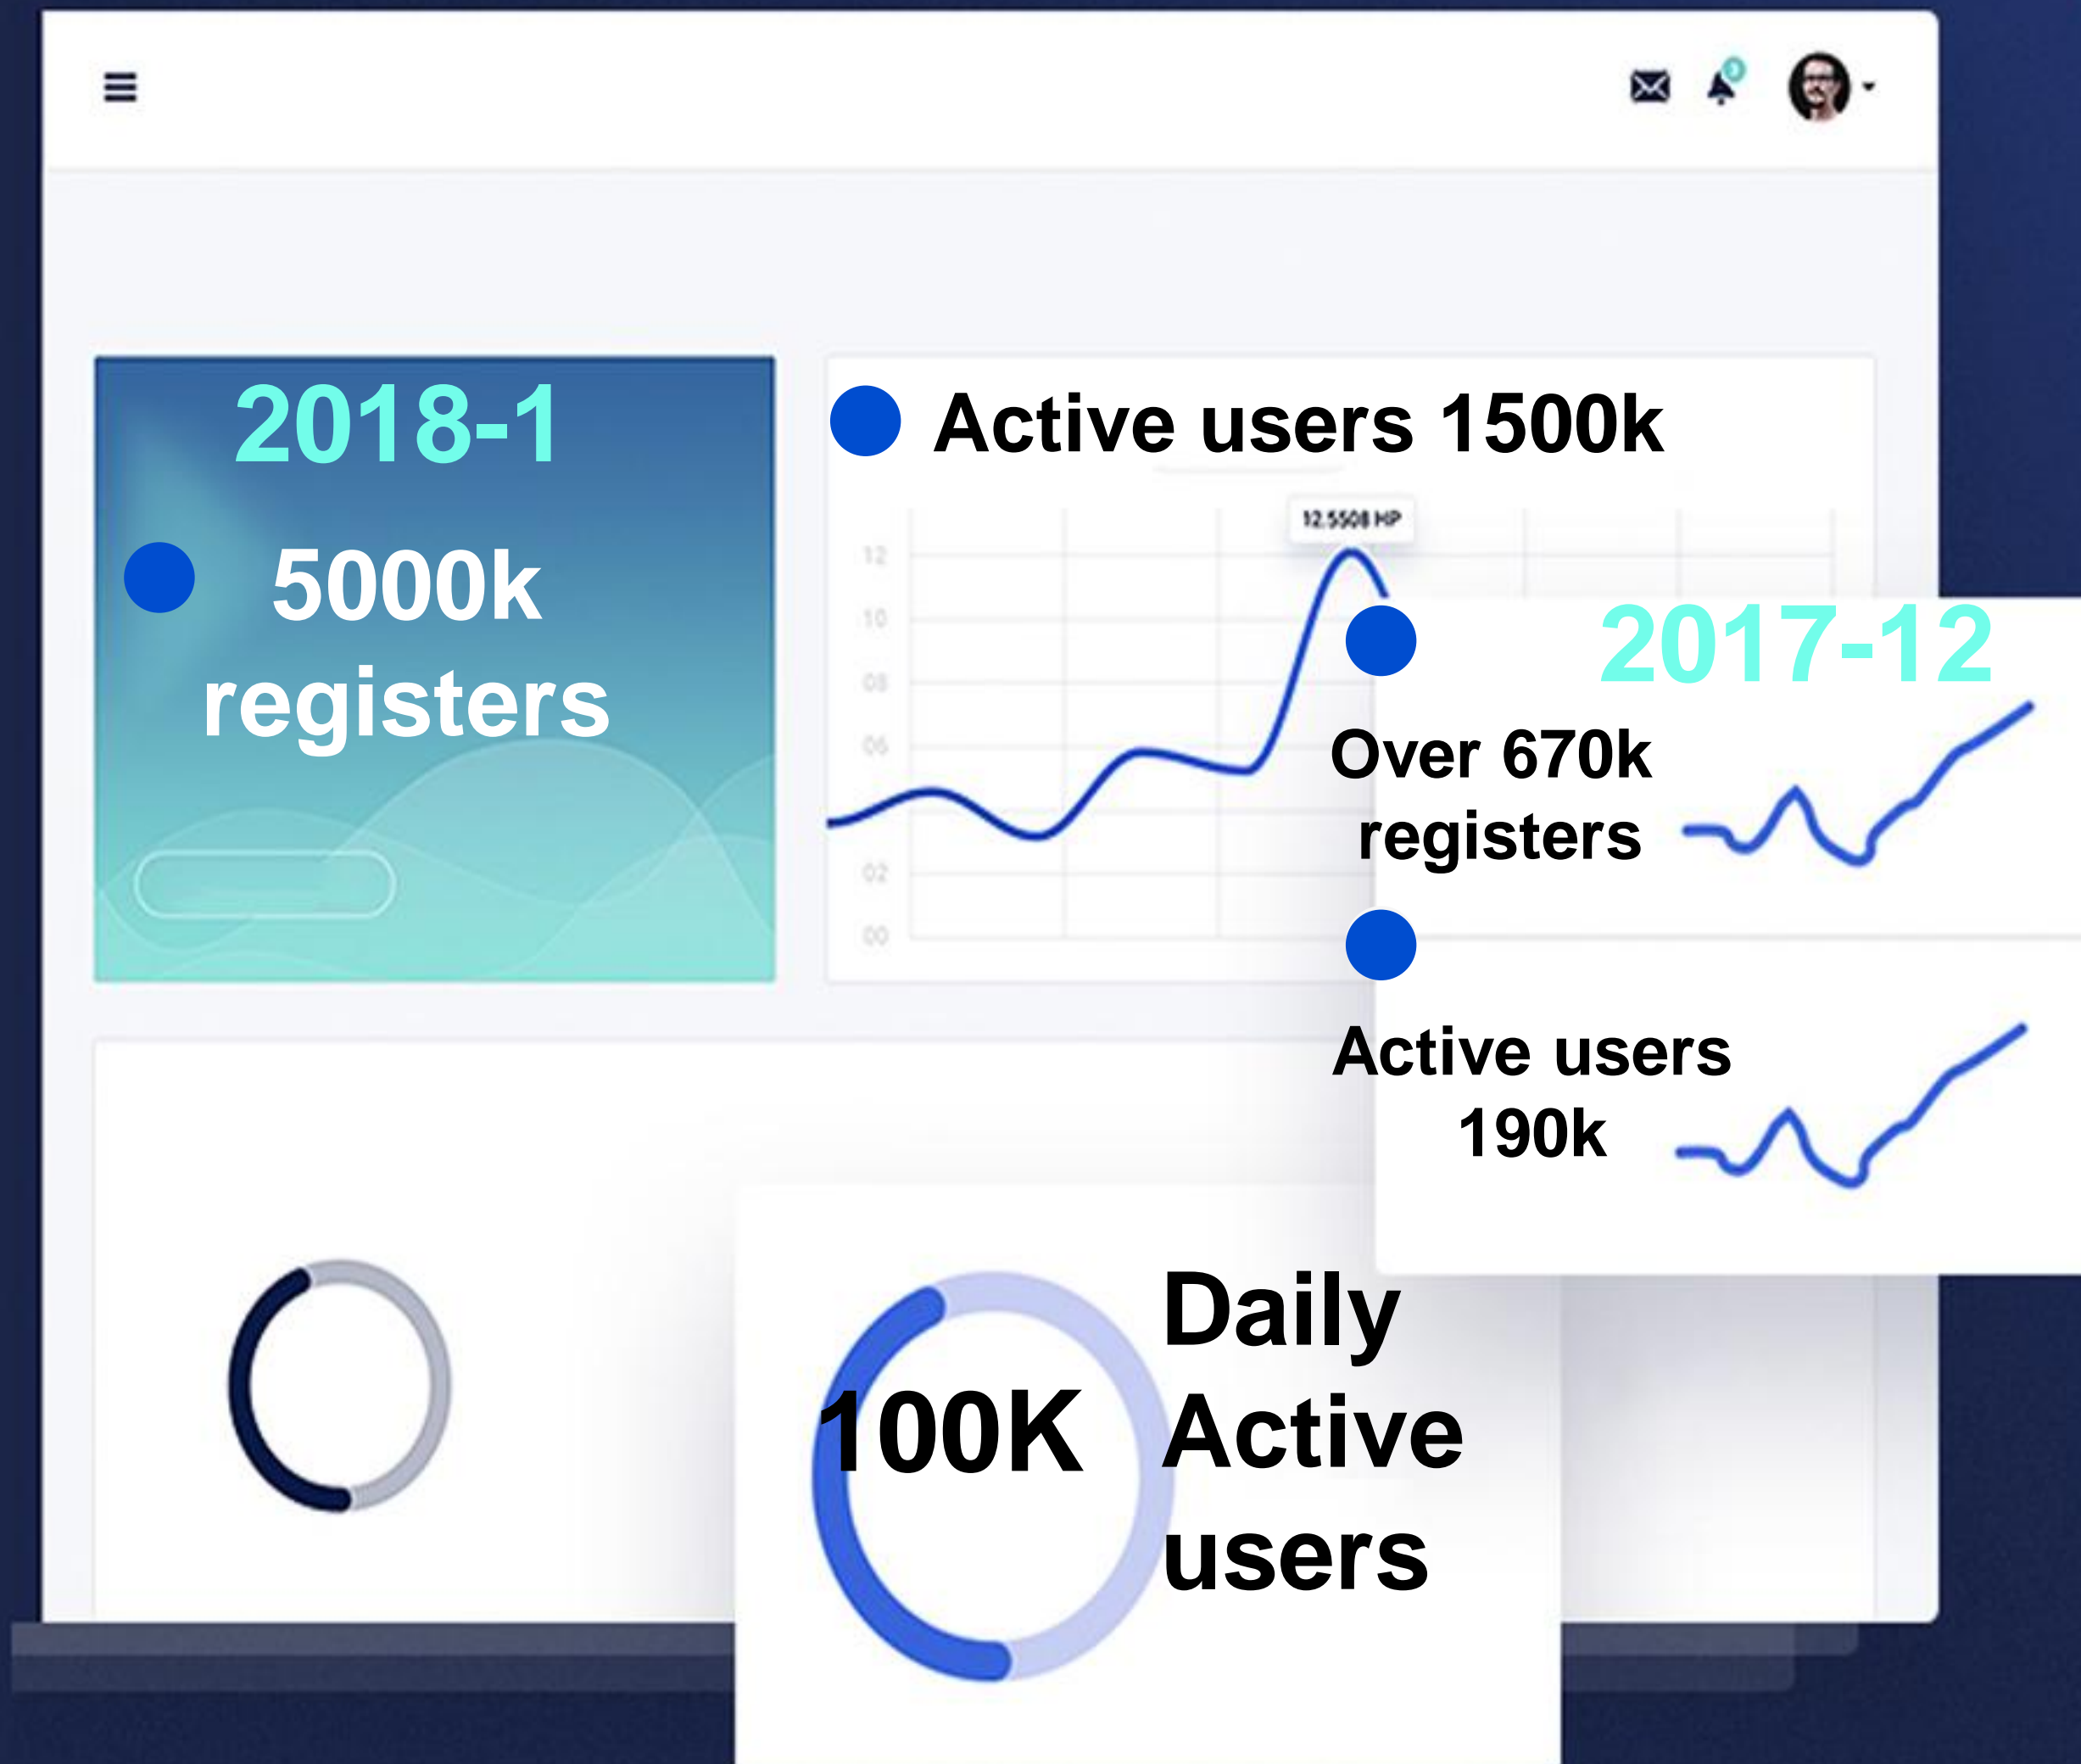

Setting up the  
digital financial  
system and  
benefiting the  
long-term  
partners of  
Qbao Network

# Qbao Network Operational data

Gained several million registered users in 4 months

Maximum daily user growth rate achieves 70%

The amount of average daily active users is 100k.

# Qbao Network Strategic Partners

**QTUM**

**PLAYCOIN**

**INK**

**MEDIBLOC**

**COINNEST**

**Energo**

**VEVUE**

**SPACE CHAIN**

**Loopring**
