Project Updates

Major Events and Milestones

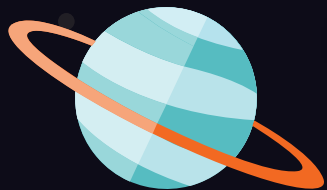

Decentralized Infrastructure for Blockchain

- Non Terrestrial Satellite network
- Provide alternative way for blockchain data distribution
- An untouchable data safe to face future challenge

SpaceChain OS (Power by Sylix)

- Enable Developers to make open source applications in Spacecraft.
- “Android” for Satellites

Tokenomics: Econ Model for Opensource

- Using token to activate Open source community.
- Having developers/contributors grow with the project

Why Spacechain

**Creating a problem-solving
model to tackle the future's
grandest challenges.**

SpaceChain成功发射首个太空区块链节点进入轨道

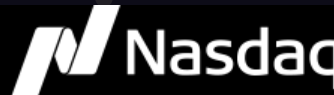

2018年03月01日

2018年2月2日，周五，人们首次发射区块链节点进入太空轨道。火箭离开中国酒泉卫星发射中心，搭载着运行量子链全节点的树莓派硬件进入天空。

SpaceChain Launches and Tests World's First Blockchain Satellite

By AccessWire, February 08, 2018, 12:45:00 PM EDT

[Vote up](#) **AA**

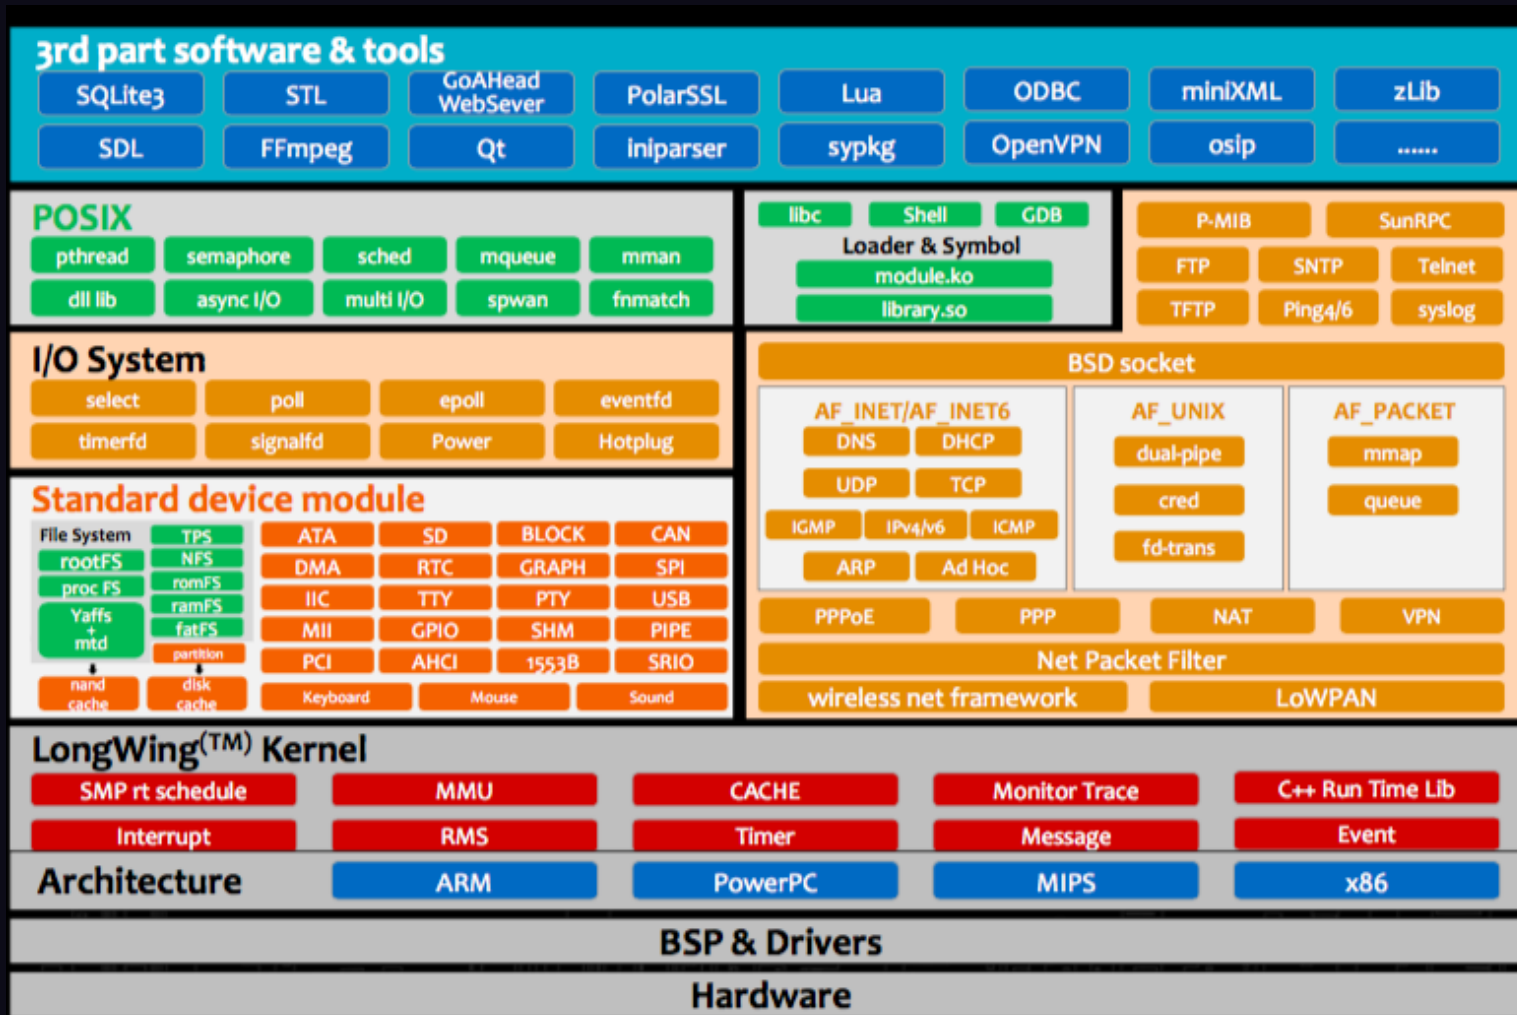

SINGAPORE / ACCESSWIRE / February 8, 2018 / Crowdfunded space agency [SpaceChain](#) has announced the world's first blockchain satellite on February 2, 2018. The satellite was carried by CZ-2D rocket at 3:51 pm local time from Jiuquan Satellite Launch Center located in the Gobi desert, China. It is equipped with a Raspberry Pi hardware development board that runs a full-node program on the Qtum blockchain.

The Singapore-based space project will launch two more satellites in 2018. Halal Chain will be operational as the first application.
